Lab 3 Report
Joel Gomez
Eric Marcelo

1. Did you and your partner run into problems? If so, what were they and how did you resolve them?

Fortunately, due to the relatively simpleness of the tasks in the lab, Eric and I did not run into very many problems. The closest thing to an issue was initially getting the button press actions to be performed upon the press itself rather than release. This faux-pas was caught immediately and remedied quickly by performing the state actions upon the button press state actions rather than at the release state actions.

2. Give a brief summary of what each partner contributed to the lab.

Eric and I worked independently on approaching our state machine models at the beginning and compared our work to confirm accurateness. We observed that although we had different state machine models with a different amount of states for some of the exercises, our output was correct. We collaborated on test cases to test each other's code for correct output.
